

Grades 6-8 Summer Math Work 2026-2027

Dear Parents/Guardians,

Over the summer, we want to ensure students are practicing the math skills they learned this past year so they return in the fall ready for a strong start to the 2026-2027 school year. To support this, each student will complete benchmark tests that review key concepts from the year. These activities are designed to keep math skills fresh and build confidence heading into the next grade level.

We strongly encourage students to begin the packet early and work through it gradually—please do not wait until August to get started. Students may use their math notebooks as a helpful reference while completing their practice work.

An answer key will be available on our website at www.schoolofthecathedral.org under the Students tab, so students or parents can check the work after completion.

For those looking for additional practice, IXL is a great resource to reinforce skills and target areas for improvement.

Each student is asked to **complete, check, and return** the summer math packet to their math teacher when school resumes in the fall. This packet will count as the first math grade of the trimester.

Thank you for your continued partnership in helping your child succeed. We wish you and your family a safe, restful, and enjoyable summer!

Sincerely,

Kellee Furno
6th and 7th Grade Math Teacher
